NEW QUESTION: 1
Your network contains an Active Directory domain named contoso.com. All servers run Windows Server 2012 R2.
The domain contains a domain controller named DC1 that is configured as an enterprise root certification authority (CA).
All users in the domain are issued a smart card and are required to log on to their domain-joined client computer by using their smart card.
A user named User1 resigned and started to work for a competing company.
You need to prevent User1 immediately from logging on to any computer in the domain. The solution must not prevent other users from logging on to the domain.
Which tool should you use?
A. The Certification Authority console
B. Active Directory Users and Computers
C. Server Manager
D. The Certificates snap-in
Answer: A
Explanation:
You can use the Certification Authority console to configure CAs. This includes the following tasks:
Scheduling certificate revocation list publication.
Installing the CA certificate when necessary.
Configuring exit module settings.
Configuring policy module settings.
Modifying security permissions and delegate control of CAs.
Enabling optional Netscape-compatible Web-based revocation checking.
