NEW QUESTION: 1
You work as a Software Developer for ABC Inc. The company uses Visual Studio .NET 2008 as its application development platform. You are creating an ASP.NET Web application using .NET Framework 3.5. The application will be deployed on an intranet server of the company. You require that the application meets the following requirements:
l Users can log on to the application by using their Active Directory credentials.
l Each Web page in the application must display user name and password controls for an unauthenticated user.
What will you do to accomplish this?
A. Use Windows authentication and disable impersonation.
B. Use Forms authentication and use the SqlMembershipProvider class.
C. Use Forms authentication and use the ActiveDirectoryMembershipProvider class.
D. Use Windows authentication and enable impersonation.
Answer: C

NEW QUESTION: 2
You are developing an ASP.NET Core website that can be used to manage photographs which are stored in Azure Blob Storage containers.
Users of the website authenticate by using their Azure Active Directory (Azure AD) credentials.
You implement role-based access control (RBAC) role permission on the containers that store photographs. You assign users to RBAC role.
You need to configure the website's Azure AD Application so that user's permissions can be used with the Azure Blob containers.
How should you configure the application? To answer, drag the appropriate setting to the correct location. Each setting may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.
NOTE: Each correct selection is worth one point.

Answer:
Explanation:

Explanation:
Box 1: user_impersonation
Box 2: delegated
Example:
* Select the API permissions section
* Click the Add a permission button and then:
Ensure that the My APIs tab is selected
* In the list of APIs, select the API TodoListService-aspnetcore.
* In the Delegated permissions section, ensure that the right permissions are checked:
user_impersonation.
* Select the Add permissions button.
Box 3: delegated
Example
* Select the API permissions section
* Click the Add a permission button and then,
Ensure that the Microsoft APIs tab is selected
* In the Commonly used Microsoft APIs section, click on Microsoft Graph
* In the Delegated permissions section, ensure that the right permissions are checked:
User.Read. Use the search box if necessary.
* Select the Add permissions button
