- E.** Eine Always On Availability-Gruppe mit sekundären Replikaten im asynchronen Festschreibungsmodus
- F.** Ein Windows-Cluster mit einer Shared-Nothing-Architektur
- G.** Protokollversand

**Answer: C**

Explanation:

Explanation

As part of the SQL Server Always On offering, Always On Failover Cluster Instances leverages Windows Server Failover Clustering (WSFC) functionality to provide local high availability through redundancy at the server-instance level—a failover cluster instance (FCI). An FCI is a single instance of SQL Server that is installed across Windows Server Failover Clustering (WSFC) nodes and, possibly, across multiple subnets.

When there is hardware or software failure of a server, the applications or clients connecting to the server will experience downtime. When a SQL Server instance is configured to be an FCI (instead of a standalone instance), the high availability of that SQL Server instance is protected by the presence of redundant nodes in the FCI.
