- A. A neighbor statement needs to be configured in R1 and R3 pointing at each other.
- B. The R1 network type should be changed to point-to-multipoint non-broadcast.
- C. The hello, dead and wait timers on R1 need to be reconfigured to match the values on R3.
- D. The serial interface in R1 should be taken out of the shutdown state.

Answer: B

Explanation:

In order for two OSPF routers to become neighbors, they must have matching network types across the links. In this case, we see that R1 has been configured as non-broadcast and R3 is using point to point non-broadcast.
